

Data Synergy Remote Desktop Launcher Utility

Release 5.2.0 January 2018

Overview

The Remote Desktop Launcher provides an internet protocol handler for the RDP:// protocol. This may be installed on end-user workstations and allows the Microsoft Terminal Services Client tool (MSTSC) to be conveniently launched from a suitably encoded HTTP page hyperlink.

For instance, the following link would launch a remote desktop session to a computer called OfficePC:

```
<a href='rdp://officepc.yourdomain.com'>Open OfficePC</a>
```

Remote Desktop Launcher provides browser independent protocol translation to support the following browsers:

- Microsoft Internet Explorer
- Google Chrome
- Mozilla Firefox

Supported Platforms

The Remote Desktop Launcher currently supports the following platforms:

- Windows XP
- Windows Vista
- Windows 7
- Windows 8.x
- Windows 10.0

The software is a common executable (EXE) on all supported versions of Windows. The software is available in both 32-bit and 64-bit formats. The 32-bit version may be used in mixed 32/64-bit workstations estates and offers identical features on 64-bit systems.

WakeMyPC Server Configuration

The Remote Desktop Launcher installs a generic protocol handler. To configure Data Synergy WakeMyPC server to use the handler configure the **WakeConnectURL** setting to: **rdp://\$computername\$.fqdomainsuffix\$**

About Data Synergy

Data Synergy is a British company based in Sheffield. We have over fifteen years' experience developing and supporting software solutions for enterprise PC deployment and management. We do not resell other vendors' products and do all of our development, sales and support from our UK base.

Our products have evolved through listening to customer ideas and applying our unrivalled knowledge of PC internals. If you have a suggestion for a new product or feature we would love to talk to you.
